

"*Out of Control* is the breakthrough concept of contemporary science and technology. It links the best of cutting-edge biology, computer science, economics, organizational theory, art, and much more.

No longer just the best journalist on the subject, Kevin Kelly with this book is actively shaping the intellectual implosion."

—Stewart Brand
Author of *The Media Lab*

"Want a conceptual toolkit for creating creation? Here it is. In *Out of Control*, Kevin Kelly does more than explain lucidly the mind-boggling new science and technology of emergent phenomena. The book changed everything I thought I knew about the meaning of evolution and life. Kelly provides a stunning reply, twenty-five years later, to Stewart Brand's challenge in the first *Whole Earth Catalogs*: 'We are as gods and might as well get good at it.'"

—Howard Rheingold
Author of *The Virtual Community* and *Virtual Reality*

"Kevin Kelly's wonderfully perceptive new book shatters more paradigms per page than any other text in this decade."

—Bruce Sterling
Author of *Islands in the Net*

"Kevin Kelly's *Out of Control* is a sweeping and imaginative tour de force...fractal and far-out, chaotic and post-Darwinian, and reaching for the Divine."

—George Gilder
Author of *Wealth and Poverty*
